

Google Cloud for Software Professionals

This instructor-led class provides an overview of Google Cloud products and services. Through a combination of presentations, demos, and hands-on labs, participants learn the value of Google Cloud and how to incorporate cloud-based solutions into business strategies.

Introduction

[Google Cloud Fundamentals Core Infrastructure - 1day \(BDT98\)](#)

Google Cloud products and services. Through a combination of presentations, demos, and hands-on labs, participants learn the value of Google Cloud and how to incorporate cloud-based solutions into business strategies.

[Migrating to Google Cloud - BDT106 / 1 Day](#)

Explore strategies for migrating from a source environment to Google Cloud. You'll start by learning about Google Cloud's fundamental concepts before moving on to more in-depth topics, like creating virtual machines, configuring networks, and managing access and identities.

Intermediate

[Networking in Google Cloud Platform - BDT116/1 day](#)

Cloud networking requires understanding of various topics such as Virtual Private Cloud (VPCs), Load Balancers, Network Security, etc. This course will explain these concepts and provide hands-on experience on GCP.

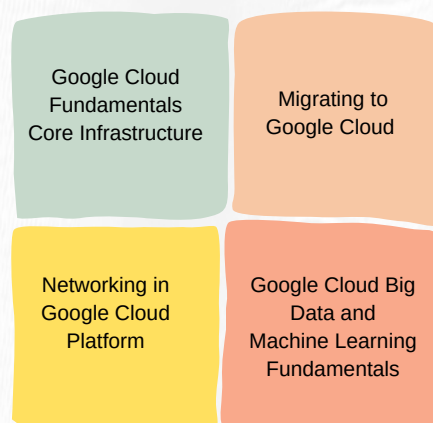

Advanced

[Google Cloud Big Data and Machine Learning Fundamentals - BDT101 / 1 Day](#)

This one-day instructor-led course introduces participants to the big data capabilities of Google Cloud. Through a combination of presentations, demos, and hands-on labs, participants get an overview of the Google Cloud and a detailed view of the data processing and machine learning capabilities.
